PROFESSIONAL SUMMARY

Empirical software engineer with 10+ years in production building backend systems, multi-tenant SaaS platforms and process automation. Strong in Node.js, NestJS, TypeScript, Python, PostgreSQL, Docker, Linux and GCP/Cloud Run, focused on microservices, REST APIs, agile (Scrum) and AI integration (LLM, RAG, MCP). Self-taught profile: my roles and production systems are my primary credential. Available full-time (remote or relocation to Spain).

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (Node.js), Python, PHP, SQL

Backend: Node.js, NestJS, Express, REST APIs, microservices, WebSockets, GraphQL, pub/sub

Frontend / data: React, Next.js, PWA · PostgreSQL, MongoDB, Redis, SQLite, Firestore

Cloud & DevOps: Docker, Linux, GCP, Cloud Run, Vercel, Git, GitHub, CI/CD, Prometheus

Security: JWT, OAuth2, HMAC, AES-256-GCM, bcrypt, Firebase Auth

AI, agents & testing: LLM (OpenAI, Anthropic, Gemini), RAG, MCP, OCR, RPA · Jest, unit testing, CI

PROFESSIONAL EXPERIENCE

Founder / Lead Developer — Humanizar Systems

Own project · 2022 — Present · Remote

- Built a multi-tenant SaaS ecosystem (e-commerce, POS with DIAN electronic invoicing and a credit module) using NestJS microservices, PostgreSQL and Docker, so Colombian SMBs could sell, invoice legally and manage credit from a single platform.
- Implemented inter-service communication with pub/sub and HMAC-signed webhooks, JWT/OAuth2 authentication, and Git plus CI/CD deployment. In production with real clients.

CTO / Head of Systems — Finca Directa S.A.S

Services contract · Current · Medellín / Remote

- Built an RPA administrative-automation system (invoice OCR, bank statement retrieval, email classification and CRM synchronization) with Node.js and Python on Linux, with idempotency and human-in-the-loop validation, to remove repetitive manual work and reduce data-entry errors.

Backend Developer — Indie Levels Studio

Fixed-term contract · Current · Remote

- Developed and maintained backend REST services and APIs (Node.js / TypeScript) with PostgreSQL for the products of a game studio with users across several countries, using Git version control and automated testing to keep releases stable.

Systems Administrator — Critertec

Fixed-term contract · 2024 — 2026 (ended)

- Operated and secured the production infrastructure (Linux, Docker, CI/CD) running the agency's digital solutions, keeping services continuously available.

Frontend Developer — Soy Digital · INDOTEL

Government project (Dominican Republic, via Critertec) · 2023

- Built the frontend with offline support and automatic synchronization for a national digital-literacy platform of the Dominican government, using React, Next.js and PWA, so registration worked even without a stable connection in the field.

Full Stack Developer & freelancer — ZENIT, INS, Kambban, IQpixels and independent · 2014 — 2021

Full-stack web applications, IT infrastructure and games for various clients (ZENIT 2020–2021, INS 2019–2020, IQpixels 2016–2017), consolidating the base of my 10+ years in production.

SELECTED PROJECTS

Ágora — AI agent platform (agora.elenxos.com)

Poly-repo architecture of separate services (Next.js frontend, Express/NestJS backend on Cloud Run, socket.io hub and Docker workers) to isolate concerns and deploy each part independently. Tool registry so agents carry out real actions, bring-your-own-key, Zod contracts, AES-256-GCM encrypted secrets and a custom MCP server. Deployed and running.

ST — executable formal-logic language (npm package)

Published on npm with its own CDCL SAT solver, type theory and 6,000+ automated tests (Jest). The logical core of Ágora.

EDUCATION & LANGUAGES

Technical Degree in Software Development — SENA (formal qualification) · essentially empirical / self-taught, 10+ years in production

Philosophy — Universidad de Antioquia (in progress) · grounding in logic and reasoning

Languages: Spanish — native · English — technical English (written), B1, conversational in progress
