STACK

- **Backend**
Node.js · NestJS · Express · TypeScript · Python · REST APIs · microservices
- **Data**
PostgreSQL · MongoDB · Redis · SQLite
- **Cloud & DevOps**
Docker · Linux · GCP / Cloud Run · Git · CI/CD
- **AI / Agents**
LLMs (OpenAI/Anthropic) · RAG · MCP · OCR
- **Security**
JWT · OAuth2 · HMAC · AES-256-GCM
- **Frontend**
React · Next.js · PWA
- **Testing**
Jest · unit testing · WebSockets / real-time

EDUCATION

Technical Degree in Software Development

SENA · formal qualification

Self-taught / empirical profile

10+ years in production · roles and production systems as credential

Philosophy (in progress)

Universidad de Antioquia · grounding in logic and reasoning

LANGUAGES

Spanish Native

English technical English (written) · B1 · conversational in progress

Steven Vallejo Ortiz

Software Engineer · Backend / Cloud / AI Automation

Medellín, Colombia · Remote · 10+ years of experience

PROFILE

Empirical software engineer with 10+ years in production building backend systems, multi-tenant SaaS platforms and process automation. Strong in Node.js, NestJS, TypeScript, Python, PostgreSQL, Docker, Linux and GCP/Cloud Run, focused on microservices, REST APIs, agile (Scrum) and AI integration (LLM, RAG, MCP). Self-taught profile: my roles and production systems are my primary credential. Available full-time, remote or relocation to Spain.

EXPERIENCE

Humanizar Systems · Founder / Lead Developer · own 2022 — Present project

Built a multi-tenant SaaS ecosystem (e-commerce, POS with DIAN electronic invoicing, and a credit module) using NestJS microservices, PostgreSQL and Docker, so Colombian SMBs could sell, invoice legally and manage credit from a single platform. Inter-service communication via pub/sub and HMAC-signed webhooks; JWT/OAuth2 auth; Git and CI/CD deployment. In production with real clients.

Finca Directa S.A.S · CTO / Head of Systems · services contract Current

Built an RPA administrative-automation system (invoice OCR, bank statement retrieval, email classification and CRM synchronization) with Node.js and Python on Linux, with idempotency and human-in-the-loop validation, to remove repetitive manual work and reduce data-entry errors.

Indie Levels Studio · Backend Developer · fixed-term contract Current

Developed and maintained backend REST services and APIs (Node.js/TypeScript) with PostgreSQL for the products of a game studio with users across several countries, using Git version control and testing to keep releases stable.

Critertec · Systems Administrator · fixed-term contract 2024 — 2026

Operated and secured the production infrastructure (Linux, Docker, CI/CD) running the agency's digital solutions, keeping services continuously available. Contract ended in 2026.

Soy Digital · INDOTEL · Frontend Developer · government project 2023 (Dominican Republic, via Critertec)

Built the frontend with offline support and automatic synchronization for a national digital-literacy platform of the Dominican government, using React/Next.js and PWA, so registration worked even without a stable connection in the field.

Earlier roles (2016–2021): Full Stack at ZENIT, INS, Kambban and IQpixels; freelance work in web, infrastructure and game development since 2014.

SELECTED PROJECTS

Ágora — AI agent platform · agora.elenxos.com

Designed and implemented the full architecture as a poly-repo of separate services (Next.js frontend, Express/NestJS backend on Cloud Run, a socket.io hub and Docker workers) to isolate concerns and deploy each part independently. Design decisions: a tool registry so agents carry out real actions (not just text), bring-your-own-key, contracts validated with Zod, secrets encrypted with AES-256-GCM, and a custom MCP server. Deployed and running.

ST — executable formal-logic language · npm package

A language published on npm with its own CDCL SAT solver, type theory and more than 6,000 automated tests (Jest). Bridges formal logic and software engineering; it is the logical core of Ágora.
