STACK

- **Backend**
Node.js · NestJS · TypeScript · REST
APIs · PostgreSQL
- **Cloud & DevOps**
Docker · Linux · GCP / Cloud Run · CI/CD
- **AI Automation**
LLM integration (OpenAI/Anthropic) ·
RAG · OCR
- **Frontend**
React · Next.js · PWA

EDUCATION

Technical degree in software development

+ 10+ years self-taught

Philosophy (in progress)

Universidad de Antioquia · grounding in logic
and reasoning

LANGUAGES

Spanish Native
English B1–B2 · technical written

Steven Vallejo Ortiz

Software Engineer · Backend / Cloud / AI Automation

Medellín, Colombia · Remote · 10+ years of experience

● PROFILE

Software engineer with 10+ years building backend systems, SaaS platforms, automation workflows and cloud infrastructure. Solid foundation in Node.js/NestJS, PostgreSQL, Docker, Linux and GCP, with a focus on AI-assisted process automation (LLM integration, RAG and OCR). I aim for reliable, maintainable and well-documented software for real clients, and I prefer to understand the problem thoroughly before writing code.

● EXPERIENCE

Humanizar Systems · **Founder / Lead Developer** · **own** 2022 — Present **project**

Built a multi-tenant SaaS ecosystem for small and medium businesses (e-commerce, POS with DIAN electronic invoicing, and credit management) using NestJS microservices and PostgreSQL, giving them tools for sales and legally compliant invoicing in Colombia.

Finca Directa S.A.S · **CTO / Head of Systems** · **contract** 2021 — Present

Built an administrative automation system (invoice OCR, bank statement retrieval, email classification and CRM synchronization) with Node.js and Python on Linux, to remove repetitive manual work from the team.

Indie Levels Studio · **Backend Developer** · **freelance** 2021 — Present

Develop and maintain backend services and APIs (Node.js) for the products of a game studio with users across several countries.

Critertec · **Systems Administrator** · **part-time** 2024 — Present

Operate and maintain the production infrastructure (Linux, Docker) that runs the agency's digital solutions.

Soy Digital · INDOTEL · **Frontend Developer** · **contract (D.R. government)** 2023

Built the frontend with offline support and automatic synchronization for a national digital-literacy platform, using React/PWA, designed for large-scale public use.

Earlier roles: Full Stack at ZENIT, INS and IQpixels; freelance work in web, infrastructure and game development since 2014.

● SELECTED PROJECTS

Ágora — AI agent platform

Designed and ran the full architecture: a NestJS microservices backend, orchestration across multiple LLM providers (OpenAI/Anthropic/Gemini), real-time communication and execution in Docker workers. Built the engine that lets agents invoke tools and carry out real actions, not just return text. Deployed and running.

ST — executable formal-logic language

A language published on npm with its own CDCL SAT solver, type theory and more than 6,000 automated tests. Bridges formal logic and software engineering.
