EXPERTISE

- **Agentic AI, LLMs & RAG**
agents that take actions, not just chat
- **Backend & APIs**
NestJS / Node · microservices · Postgres
- **Distributed architecture**
multi-tenant systems in production
- **Cloud · DevOps · Linux**
Docker · Cloud Run · self-hosted infra
- **Frontend**
Next.js / React · PWA · SEO
- **Process automation**
OCR · integrations · AI harnesses

EDUCATION

Philosophy

University of Antioquia

Software technician

+ self-taught path (10+ years)

English Technical (read/write)

Steven Vallejo Ortiz

Philosopher & Computer Scientist · Software Engineer

Medellín, Colombia · 10+ years of production systems

● PROFILE

Analytic philosopher (University of Antioquia) and lifelong computer engineer, with 10+ years building and operating software in production. My edge isn't a list of technologies —I command the full modern ecosystem and pick the tool to fit the problem— but a deep understanding of systems and AI, and working with agentic AI that multiplies what can be built and shipped. I've served as CTO / Head of Systems, Senior Backend Developer and SysAdmin, and founded an enterprise SaaS ecosystem.

● EXPERIENCE

Finca Directa S.A.S · CTO / Head of Systems

2021 — Present

I lead the production systems and built an enterprise automation harness: invoice OCR, bank-statement retrieval, email classification and CRM synchronization.

Humanizar Systems · Founder / Lead Developer

2022 — Present

Architected end to end a multi-tenant enterprise SaaS ecosystem: e-commerce (Graf), POS with DIAN e-invoicing (Sinergia POS), credit fintech (FIAR) and messaging, on NestJS microservices.

Critertec · Systems Administrator

2024 — Present

I operate and secure the infrastructure that keeps the agency's digital solutions running in production.

Indie Levels Studio · Senior Backend Developer

2021 — Present

I lead the services and APIs for the products of a video-game studio with clients worldwide.

Soy Digital · INDOTEL · Government (Dominican Rep.)

2023

Frontend with offline support and automatic sync for a national digital-enablement platform aimed at millions of users.

Earlier roles: Full Stack at ZENIT, INS and IQpixels, and freelance in infrastructure, web and games since 2014.

● FEATURED PROJECTS

Ágora **FLAGSHIP**

Distributed AI-agent SaaS platform (7-service poly-repo): an agentic engine of ~150 tools, multi-LLM (OpenAI/Anthropic/Gemini/DeepSeek), a real-time hub and a fleet of ~30 Docker workers. Architecture, backend, AI, frontend and DevOps end to end, in production for under \$1/month.

ST — executable formal-logic language

Published on npm with a custom SAT solver (CDCL), type theory and 6,000+ tests. Where analytic philosophy meets engineering.
